

*U.S. Green Building Council
LEED Project
Help List*

Master WoodCraft Cabinetry uses environmentally friendly materials in our construction of cabinetry.

Some of the raw materials we use are also **LEED Certified Materials** on Green projects. Each project will accumulate points differently based on the style of doors and the location of the projects in relation to our factory in Marshall, Texas.

Below is a list of potential credits for raw materials used on LEED certified Green projects.

- **Credit 4.1 – Recycled Content. Specify 5% (post-consumer + ½ post industrial)**
 - Specify a minimum of 25% of building materials that contain in aggregate, a minimum weighted average of 20% post-consumer recycled content material, OR, a minimum weighted average 40% post-industrial recycled content material.
 - **1 Point – Automatic due to the material Master WoodCraft uses to manufacture our cabinets.**
- **Credit 4.2 – Recycled Content. Specify 10% (post-consumer + ½ post industrial)**
 - Specify an additional 25% (50% total) of building materials that contain in aggregate, a minimum weighted average of 20% post-consumer recycled content material, OR, a minimum weighted average of 40% post-industrial recycled content material.
 - **1 Point – Automatic due to the material Master WoodCraft uses to manufacture our cabinets.**
- **Credit 5.1 – Local/Regional Materials. 20% Manufactured Locally**
 - Specify a minimum of 20% of building materials that are manufactured (*manufactured refers to the FINAL ASSEMBLY of components into the building product that is furnished and installed by the tradesman. For example: if the hardware comes from Dallas, Texas, the lumber from Vancouver, British Columbia and the joist is assembled in Kent, Washington; then the location of the FINAL ASSEMBLY is Kent, Washington*) regionally within a radius of 500 miles.
 - **1 Point – If the project is within a 500 radius of Marshall, Texas (Master WoodCraft’s manufacturing faculty).**
- **Credit 5.2 – Local/Regional Materials. Of 20% Above, 50% Harvested Locally**
 - Of these regionally manufactured materials, specify a minimum of 50% that are extracted, harvested, or recovered within 500 miles.
 - **1 Point – Automatic due to the materials Master WoodCraft uses to manufacture our cabinets.**

*U.S. Green Building Council
LEED Project
Help List*

In addition to environmentally friendly raw materials we also use materials that enhance the **Indoor Environmental Quality** of multi-family housing. Below is a list of potential credits for low emitting materials used on LEED certified Green projects.

- **Credit 4.1 – Low Emitting Materials: Adhesives and Sealants**
 - Adhesives must meet or exceed the VOC limits of South Coast Air Quality Management District Rule #1168 by, and all sealants used as a filler must meet or exceed Bay Area Air Quality Management District Reg. 8, Rule 51.
 - **1 Point – Automatic due to the materials Master WoodCraft uses to manufacture our cabinets.**
- **Credit 4.2 – Low Emitting Materials: Paints**
 - Paints and coatings must meet or exceed the VOC and chemical component limits of Green Seal requirements.
 - **1 Point – Automatic due to the materials Master WoodCraft uses to manufacture our cabinets.**

NOTE: Each project varies on the amount of potential LEED points. Have your salesman submit your project information to our Environmental Department and we will calculate the available points and send a report to you outlining each available point for your LEED Certified project.
